ACRRM
accreditation is
pending

Activity Reference: 1278283

Format

F2F – light supper provided

RSVP

COB 22 July 2025

if capacity is not reached beforehand

Event Photography, Footage & Recording

By attending this event, you agree to being photographed and/or recorded by WNSW PHN and identified partners. Any photographic and recorded material may then be used for online, social media, marketing, promotional and reporting purposes. If you do not consent to your image(s) or voice being recorded or shared, please email cpd@wnswphn.org.au

Management of acute knee injuries and osteoarthritis – Latest guidelines and evidence

Presenter

Dr James Coolican, Orthopaedic Surgeon

Knee injuries, pathology and symptoms including stiffness, instability and locking are common presentations in primary care for all ages with varying aetiologies. Consequently, diagnostic investigations and treatment options are wide-ranging. Rural and regional GPs have an important role in managing these presentations.

The increasing availability of advanced imaging techniques, injectable therapies and surgical interventions has improved management possibilities but also raised concerns about over-investigation and overtreatment.

This session will enable GPs to explore acute, sub-acute and chronic knee pain, review current best evidence and discuss practical recommendations to help both diagnostic and treatment decision-making.

Program

6.30pm Registration/light refreshments (*provided*)
6.55pm Welcome
7.00pm Education session
8.00pm Q&A and interactive discussion
8.25pm Evaluation
8.30pm Close

Learning Outcomes

- Discuss how to optimise non-operative management of knee osteoarthritis
- Identify whether a painful knee is suitable for joint preservation, partial or total joint replacement
- Outline the initial treatment strategies of an acute knee injury
