Join us for an insightful webinar on Digital Transformation in Australian General Practice, specifically designed for GP practice owners and practice managers. We will share groundbreaking research findings on making primary healthcare services more efficient and person-centred using digital technologies. Learn which types of digital technologies patients value, which types clinicians and staff prefer, and which types genuinely support clinic performance. Gain practical insights into why certain technologies are preferred, how they are used, and their impact on clinic performance. As a special incentive, participants will be invited to take part in the next phase of our research, a survey that offers a comprehensive benchmarking report. Don't miss this opportunity to engage with experts and explore innovative solutions for the challenges facing primary health care today.
