

Tuesday, 11th May 2021 7pm - 9pm AEST

Topics in the next FREE webcast:

- **Update on Safety and Adverse Effects of the COVID Vaccines Being Used in Australia** - Prof Kristine Macartney *Director, NCIRS*
- **PSA Testing – An Update on Best Practice** - A/Prof Jeremy Grummet *Urological Surgeon; Director, Clinical Research in Urology, Alfred Health; Clinical Associate Professor, Department of Surgery, Monash University; Co-Founder, MRI PRO*
- **An Update on Hypogonadism and Testosterone Replacement** – Prof Robert McLachlan *Physician-Scientist; Director of Clinical Research, Hudson Institute of Medical Research; Principal Research Fellow, NHMRC; Deputy Director, Endocrinology Unit, Monash Medical Centre*
- **Depression in Men – Practical Advice** – Prof David Castle *Psychiatrist; Inaugural Scientific Director, Centre for Complex Interventions (CCI) at the Centre for Addictions and Mental Health (CAMH), Toronto, Canada; Professor, Department of Psychiatry, The University of Toronto*

Register here for this FREE webcast!

Participants will receive:

- **RACGP:** 4 CPD activity points **applied for**
- **ACRRM:** 2 hours under the Educational Activities Category **applied for**
- **Pharmacists:** currently **seeking accreditation**
- Certificate of attendance
- Opportunity to receive FREE product samples and product information

More information:

Update on Safety and Adverse Effects of the COVID Vaccines Being Used in Australia

Prof Kristine Macartney

Director, NCIRS

As the information about clots and other risks develop, there are new guidelines, indications, and patient information that immunisers need to get up to speed on. The situation is very fluid and this lecture is the latest authoritative update available on this and other related issues.

PSA Testing – An Update on Best Practice

A/Prof Jeremy Grummet

Urological Surgeon; Director, Clinical Research in Urology, Alfred Health; Clinical Associate Professor, Department of Surgery, Monash University; Co-Founder, MRI PRO

PSA testing continues to be a topic that is a cause of debate and sometimes confusion about which men should be tested and how the results should be interpreted and acted upon. We will look at the latest advice on how best to use this test in primary care, and how to explain the test to patients. This talk will also look at new and emerging ideas in assessing prostate cancer risk including prostate MRI and other serum markers.

An Update on Hypogonadism and Testosterone Replacement

Prof Robert McLachlan

Physician-Scientist; Director of Clinical Research, Hudson Institute of Medical Research; Principal Research Fellow, NHMRC; Deputy Director, Endocrinology Unit, Monash Medical Centre

Male hypogonadism, caused by intrinsic pathology of the hypothalamic–pituitary–testicular (HPT) axis, is an under-diagnosed condition not to be missed. By contrast, late onset hypogonadism (LOH), due to functional suppression of the HPT axis from age-related comorbidities, may be less common than previously believed. Prof McLachlan will provide an update on current evidence, appropriate testing, which patients should be managed with Testosterone supplementation and which by lifestyle modification alone. An overview of current Testosterone delivery options – gel, patch or injection and which option suits which patient will also be covered.

Depression in Men – Practical Advice

Prof David Castle

Psychiatrist; Inaugural Scientific Director, Centre for Complex Interventions (CCI) at the Centre for Addictions and Mental Health (CAMH), Toronto, Canada; Professor, Department of Psychiatry, The University of Toronto

Mood disorders in men are less common than in women, but keep this diagnosis in mind if behaviour is becoming violent. Allowing men to express their emotional pain and marshalling support, offering helplines, support groups all help. Pay attention to longitudinal history when differentiating depression from bipolar disorder, and if you suspect this, avoid prescribing SNRIs and tricyclics. When the patient cannot see the pain they will cause when they die by suicide, we may have to take active measures even against the patient's will.
