

# Identification and Management of Cirrhosis in General Practice

Dr Chris Schneider MD FRCPC Gastroenterologist & Hepatologist

Dr Anita Muñoz MBBS(Hons) FRACGP MPH  
GradCertClinTeach General Practitioner & Medical Educator

Dear Colleagues,

**It is our pleasure to invite you to our online educational meeting on gastroenterology!**

To register, please use the link below. The meeting is RACGP accredited and all attendees will be invited to complete an evaluation form and receive a Certificate of Attendance.

We look forward to your attendance and participation.

Take care and all the best,

Chris and Anita

**Meeting: Thursday 29 July 2021;  
7-8:30pm AEST**

## About this Education.

With Australia's rising rates of liver disease risk factors, and the increasing prevalence of non-hepatitis-associated liver disease, all Australian general practitioners will see and manage patients with or at risk of this condition.

A greater awareness of liver disease and cirrhosis and greater confidence in screening, identification and management in primary care will help to mitigate these trends and reduce the heavy and costly disease burden in the community.

## Who is this series for?

- General Practitioners
- Primary Care Nurses
- Gastroenterology Registrars and Trainees
- Gastroenterology Nurses

## Learning Outcomes.

1. Outline the definition of chronic liver disease and cirrhosis
2. Describe the diagnostic criteria of cirrhosis via an accurate understanding of investigations and clinical signs used in the assessment of liver disorders
3. List the complications and sequelae associated with cirrhosis and cite the signs, symptoms and investigations used to identify them
4. Explain the lifestyle, medication, procedural and surgical management of cirrhosis complications, and the role general practitioners play in that management
5. Detail the management of a patient with decompensated liver disease in the general practice setting, the role of gastroenterologists, and criteria for admission/hospital-based care
