Augmented *caring@home* resources to assist service provider preparedness during the COVID-19 pandemic

To assist clinical service providers during the COVID-19 pandemic, *caring@home* have produced augmented *caring@home* packages for carers. These include an Emergency COVID-19 pack to support home-based care and help limit risks of community COVID-19 transmission. The packages are funded by the Australian Government.

Using the resources contained in the Emergency COVID-19 packs, health professionals can remotely teach volunteer carers how to insert a subcutaneous cannula or give a subcutaneous injection.

The augmented *caring@home* package for carers is free and includes:

- Regular *caring@home* package for carers
- Emergency COVID-19 pack:
 - Starter pack of clinical items for training and practise
 - Step-by-step guides, information sheets and short training videos on USB.

More information about the inclusions in the augmented package for carers and the Emergency COVID-19 pack can be found here.

**The Emergency COVID-19 pack can be easily removed, and the remaining 'regular' package used for patients not at risk, or diagnosed with COVID-19.*
